

THE ORIGINAL

OATLY!

From Reactive to Resilient

Group 2: Dayan Paiewonsky, Omar Hatab, Louis Bahner, Maria Camila Puerto, Prashant Jindal, Ritvik Krishnan

Company Background

1994

Founded at Lund University.
Enzymatic process patented.

1990s–2000s

Sold as a niche health product for lactose intolerant Swedes.

2012

Growing global awareness of plant-based diets creates new market opportunity.

2014

Toni Petersson appointed CEO.
Rebrand begins.

From Shortage to Asset-Light

Tri-Modal Production System

End-to-End

Oatly owns grain-to-carton. Total control for R&D and IP protection.

Hybrid

Oatly owns oat base lines inside partner facilities,

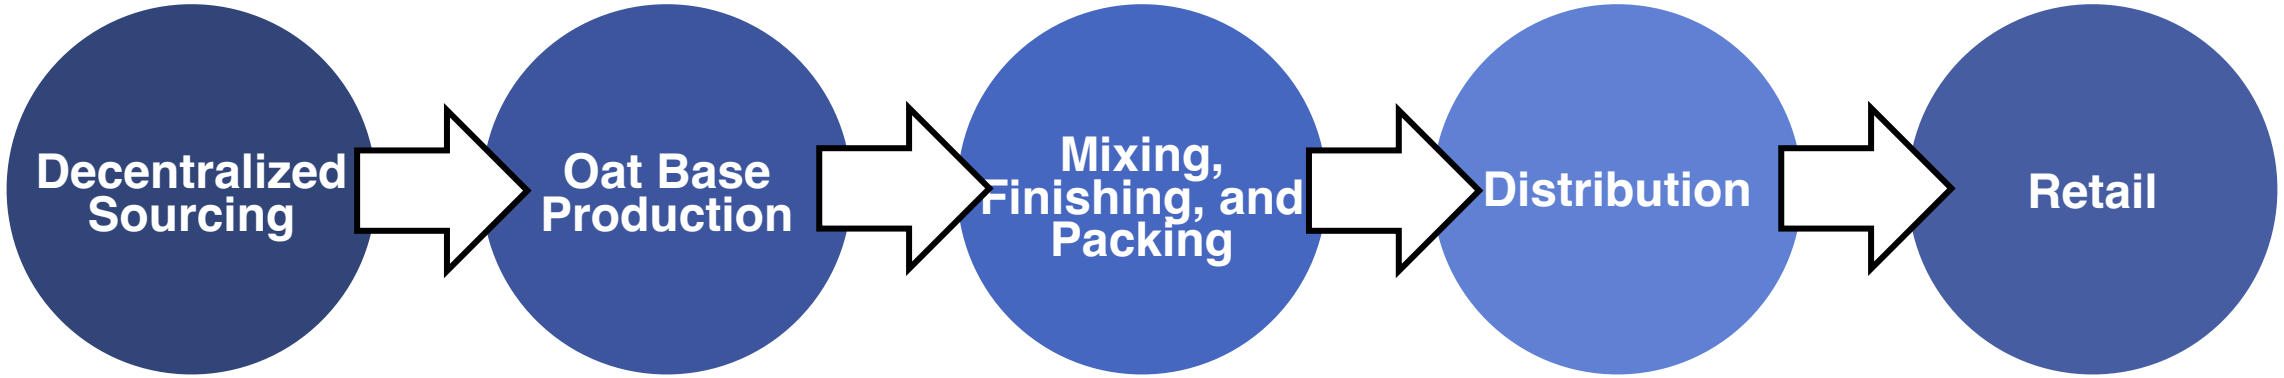

Co-Packing

Fully outsourced. Maximum flexibility, minimal control.

	Pre-Shortage Era (Pre-2017)	Pre-Asset-Light Era (2017 - 2022)	Asset-Light (Current)
Manufacturing Mix	100% End-to-End	21% End-to-End 34% Hybrid 45% Co-packing.	32% End-to-End 63% Hybrid 5% Co-packing.
CapEx	Low: Maintenance of a single facility.	Heavy Investment: $350M–$400M	Reduced Investment: $20M–$30M.
Operational Goal	IP Protection	Volume	Profitability
Production Architecture	Single facility	Dispersed	Consolidated

Supply Chain Flow

Oats, oils, vitamins sourced globally; F.A.R.M. regenerative.

Oatly controls enzymatic hydrolysis inside partner lines.

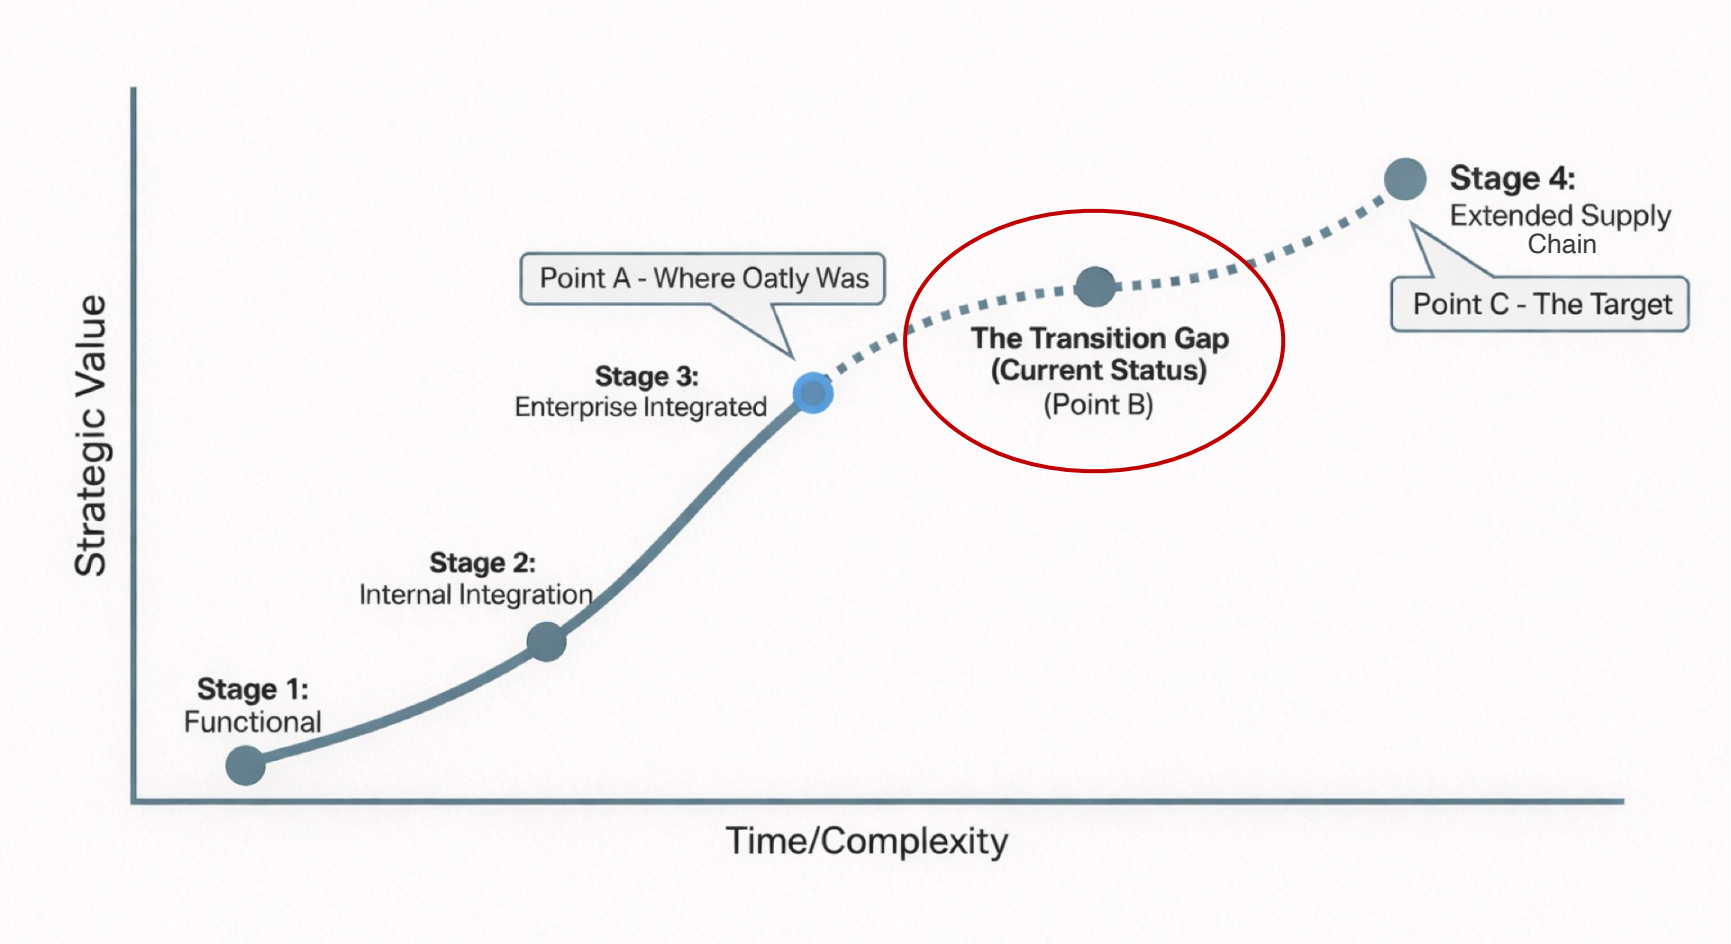

Manufacturing partners blend, aseptically fill, and package.

3PL runs e-commerce and cold-chain for most volume.

Targeting both cafés and end consumers

Maturity Assessment

Oatly is stuck between the **Enterprise Integrated** and the **Supply Chain Extended** phases.

5-Year Roadmap Overview

Outside-In Planning

Real-time demand sensing and increased visibility across the supply chain

Year 1: Digital Foundation

Unified cloud ERP to eliminate silos.

Pilot ‘Outside-In’ demand sensing with real-time POS data.

Objective: Create visibility and a single source of truth across the ecosystem.

Year 2: Resilience Building

Strategic buffers for critical components.

Long-term agreements with oat growers to hedge climate volatility.

Objective: Reduce supply chain fragility and improve sourcing stability.

5-Year Roadmap Overview

Decoupling

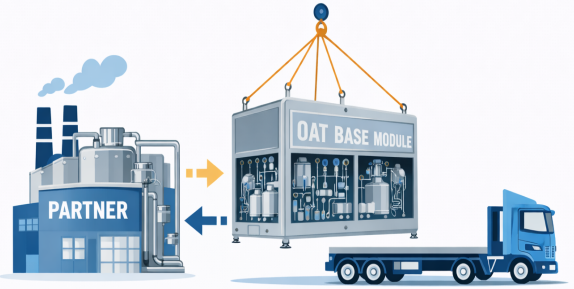

Separating IP production from partner infrastructure.

Year 3: Structural Pivot

Decouple oat base into modular, transportable units to break partner-facility dependency.

Objective: Reduce supply chain dependence to structural fiexibility.

5-Year Roadmap Overview

Adaptive Supply Network

Ecosystem collaboration
with plug-and-play agility

Year 4:
Ecosystem Orchestration

Scale modular production, transitioning to strategic partnerships with shared real-time digital visibility.

Objective: Build an agile, collaborative network with real-time visibility.

Year 5:
Full Agility

Achieve "Plug and Play" flexibility, enabling frictionless reconfiguration of the global network.

Objective: Enable rapid, frictionless reconfiguration of global operations.
